The formal drawings submitted on October 21, 2004, are acceptable.

The specification is objected to because of the following minor informalities. On page 1, in the section labeled "**PRIORITY INFORMATION**", indication should be made that U.S. Patent Application Serial Number 10/412,089 has issued as U.S. Patent Number 6,809,856. Applicant's cooperation is requested in correcting any other errors of which applicant may become aware in the specification.

Claims 3, 4, 10, 11, 13-15, 17 and 18 are objected to because of the following minor informalities. The last word of claim 3 should be "medium" rather than "material". The last word of claim 4 should be "medium" rather than "region". The last word of claim 10 should be "medium" rather than "material". The last word of claim 11 should be "medium" rather than "region". Claim 13 is word-for-word identical to claim 6. It is therefore believed that claim 13 is intended to depend from claim 8 rather than from claim 1. Claim 14 is word-for-word identical to claim 7. It is therefore believed that claim 14 is intended to depend from claim 8 rather than from claim 1. In line 1 of claim 15, the word "medium" should be inserted after "nonlinear". The last word of claim 17 should be "medium" rather than "material". The last word of claim 18 should be "medium" rather than "region". Appropriate correction is required.

Claims 1-21 are allowed. The prior art fails to disclose or reasonably suggest the claimed frequency conversion method and device, wherein a moving grating is formed in a nonlinear medium by introducing at opposite ends thereof a set of electromagnetic radiation having varying frequencies, inputting an electromagnetic radiation signal at a first frequency into the nonlinear medium, and extracting a converted frequency of

Art Unit: 2874

electromagnetic radiation from the nonlinear medium. The most relevant prior art has been submitted by applicant, but does not disclose or suggest this "shock wave" method of frequency conversion in a nonlinear medium. For example, The IEEE TRANSACTIONS ON MICROWAVE THEORY AND TECHNIQUES article by Scherbatko et al discloses a very similar technique for wavelength shifting (frequency conversion), but specifically states on page 726 that "*the wavelength conversion technique reported here does not rely on nonlinear properties of the semiconductor medium to implement a moving refractive index grating*". Other bits and pieces of the claimed method and device are disclosed by the cited prior art, but none of the references discloses or suggests the totality thereof. The claims are therefore allowed.

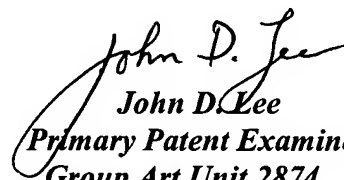

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. As just mentioned, the most relevant prior art is represented by the documents submitted by applicant in the Information Disclosure Statements received on April 8, 2004; July 14, 2004; and October 7, 2004. All of these documents have been considered and made of record (note the attached copy of forms PTO-1449). The sole prior art document cited by the Examiner (U.S. Patent 6,809,856 to Reed et al) is the Patent which has matured from applicant's parent application Serial Number 10/412,089, filed April 11, 2003.

This application is in condition for allowance except for the following formal matters: the objections to the claims and specification as outlined above.

Prosecution on the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

A shortened statutory period for reply to this action is set to expire **TWO (2) MONTHS** from the mailing date of this letter.
